

Africa's LIQUID CONTROL & TANKER LOADING Specialists

The name Soliflo has been synonymous with highly specialised bulk liquid control, tanker loading and off-loading systems and services throughout the Southern African Development Community (SADC) countries and beyond since 1984.

As the region's liquid control and tanker loading specialists, Soliflo is a principal supplier of a wide range of safe, efficient and environmentally-friendly liquid control, fluid and gas transfer solutions to tanker operators as well as leading brand access and loading equipment for road, rail and marine tankers.

Under its current ownership and management since 2003, the company operates Soliflo (Pty) Ltd and Soliflo International (Pty) Ltd and has forged strong ties with leading local and international equipment manufacturers, suppliers and engineering companies and is well equipped to provide a diverse number of industry sectors with an extensive, top quality range of products and services.

In addition to servicing the SADC countries, Soliflo's objective to expand its footprint within Africa has led to the formation of Industrial Flow Systems (IFS), Mozambique in 2013 and Soliflo International, Kenya in mid-2017.

Strategically positioned, these satellite sales, service and support operations have given Soliflo added impetus and ease of access to key markets throughout the continent.

PRODUCT PORTFOLIO & SERVICES

Soliflo's product portfolio includes tank truck equipment, tanker grounding and earthing devices, pumps, instrumentation and flow control equipment, vapour recovery and gas combustion systems as well as integrated systems. The company's comprehensive range of related equipment includes industrial hoses and assemblies, dry break couplings and adaptors as well as breakaway and emergency release couplings.

Recognising the inherent danger of personnel falling from tankers at bulk loading and off-loading facilities, Soliflo has also developed a comprehensive range of tanker access, fall prevention and safety systems to prevent potential operator injuries and fatalities.

In addition to our mobile product installation technical teams, Soliflo has on-site aftermarket service, repair and maintenance facilities situated at its Johannesburg head office operation. Staffed by skilled technicians, we are able to assist customers with all their specialised requirements.

Soliflo also offers an equipment inspection and evaluation service following which customers are provided with a detailed Inspection Report outlining the condition of their equipment together with our recommendation for repair, refurbishment or upgrading plus a detailed quotation on request.
